

IN THE CLAIMS

Please amend claims 1 and 4, and add claims 7-10 as follows:

1 1. (Currently amended) An electronic device comprising a
2 housing formed by at least ~~two housing parts one of which, called a~~
3 screen part and a fixed part, said screen part being ~~is~~ integral
4 with a retractable screen which may occupy a ~~first position called~~
5 ~~closed position and an~~ second position called open position
6 relative to a ~~part called the~~ fixed part, characterized in that
7 wherein in the ~~position called~~ closed position, the fixed part
8 partly masks the screen, said screen part being separable from said
9 fixed part.

1 2. (Original) An electronic device as claimed in claim 1,
2 characterized in that said screen part is mounted on projections so
3 as to permit it being displaced.

1 3. (Previously presented) An electronic device as claimed in
2 claim 1, characterized in that "hard points" are provided when said
3 screen part is displaced, so that it can occupy stable positions.

1 4. (Currently amended) An electronic device as claimed in
2 claim 1, ~~characterized in that a guide~~ further comprising guiding
3 parts is provided including a first guiding part and a second
4 guiding part, said first guiding part having recesses which are
5 ~~integral with one of said guiding parts~~ in which can be
6 accommodated during the displacement a spring system which is
7 integral with the ~~other~~ said second guiding part so as to create
8 ~~said "hard points"~~ provide stable positions for said screen part.

1 5. (Original) An electronic device as claimed in claim 1,
2 characterized in that the positions of the screen between two
3 positions are ensured by latches that can be unlocked by a button.

1 6. (Original) An electronic device as claimed in claim 5,
2 characterized in that the latches permit to separate the two parts
3 of the housing.

1 7. (New) An electronic device as claimed in claim 1, wherein
2 said closed position corresponds to a first operating mode of said

3 electronic device and said open position corresponds to a second
4 operating mode of said electronic device.

1 8.(New) An electronic device as claimed in claim 7, wherein
2 said first operating mode includes telephone functions and said
3 second operating mode includes receiving information from a WAP
4 system.

1 9.(New) An electronic device as claimed in claim 1, wherein
2 said fixed part includes a switch that protrudes from a groove in
3 said screen part in said closed position, said switch being
4 depressed by said screen part in said open position, wherein said
5 electronic device is configured to switch between two screen
6 formats in response to a position of said switch.

1 10.(New) An electronic device as claimed in claim 1, further
2 comprising position detection means, wherein said electronic device
3 is configured to switch between two screen formats in response to
4 signals from said position detection means.
